Read the following passage and mark the letter A,B,C or D on your answer sheet to indicate the correct answer to each of the numbered blanks from 38 to 42.

During my last couple of years as a student here at Union High, I have noticed that there is nothing to do during our occasional free periods. Hanging around in the hallways or in the library with friends isn't productive or relaxing. The student body council noticed this as well and brought it to the attention of Mr. Swanson and the rest of the faculty. A meeting to discuss the issue occurred last Friday, February 10th, in the all - school meeting room.

The faculty not only agreed that there wasn't much to do during these free periods, but also seemed determined to find a solution. The student body council and the faculty talked about different ideas for a long time. The faculty had noticed that some students don't like using their free periods for studying. Instead, **they** spend their time **disrupting** the students who want to study by being noisy in the library. By the end of the meeting, the faculty had decided to put a pool table and a ping pong table in our student lobby at the start of next semester.

I know some people will be concerned about getting their work done with these potential distractions, but I believe this will help us all in enjoying our time at school. I agree that it's important to complete our work but it is just as important to enjoy ourselves and to relax with our friends. School is already such a stressful place. It makes many students feel worried and anxious. We want our school to be a friendly place so that students want to come every day. Students should remember that this change will make the library a lot quieter. Because of this, the students who want to study will be able to do so in peace.

To all the students at Union High, I sincerely hope that you enjoy the new additions to our lobby. Hopefully, **they** will make our free periods a lot more relaxing. If you happen to have one of the same free periods as I do, then please challenge me to a game of pool!

Question 39: What is the text mostly about?

- A. Another choice for free periods at Union High
- B. A chance to study in peace at Union High library
- C. How students at Union High spend their free periods
- D. A meeting at Union High about its new facilities

Question 40: What is the meeting on February 10th about?

- A. Students hanging around freely during free periods.
- B. Ineffective time at the Union High library.
- C. Finding a solution to spending free periods effectively.
- D. Maintaining disciplines at Union High school.

Question 43: In paragraph 4, the word **they** refers to _____.

- A. free periods
- B. our friends
- C. new additions
- D. all the students

Read the following passage and mark the letter A,B,C or D on your answer sheet to indicate the correct answer to each of the numbered blanks from 43 to 50.

Robots are useful for exploring and working in space. In particular, many robots have been sent to explore Mars. Such robots have usually looked like a box with wheels. Though these robots are useful, by their very nature they are unreliable, extremely expensive, and they break easily. Also, they cannot do very many tasks. Because of these problems, scientists have been developing a new and unusual kind of robot. These new robots move like snakes, so they have been given the name "snakebots."

The way a snake is shaped lets it get into very small spaces, like cracks in rocks. It can also push its way below the ground or climb up different kinds of objects, like high rocks and trees. Such abilities account for the usefulness of a robot designed like a snake. A snakebot would be able to do these things, too, making it much more effective than regular robots with wheels, which easily get stuck or fall over. Since they can carry tools, snakebots would be able to work in space, as well. They could, for example, help repair the International Space Station.

But how can such a robot shape be made? A snakebot is built like a chain made of about thirty parts, or modules. Each module is basically the same in that they all have a small computer and a wheel to aid movement. The large computer in the "head" of the snake makes all of the modules in a snakebot work together.

The modular design of the snakebot has many advantages. If one module fails, another can be added easily. Snakebot modules can also carry different kinds of tools, as well as cameras. Since each module is actually a robot in itself, one module can work apart from the rest if necessary. That is, all the modules can **separate** and move on their own, and then later, reconnect back into a larger robot. Researchers are also trying to develop snakebots made of a special kind of plastic that can change its shape using electricity, almost like animal muscles. Snakebots made with this plastic will be very strong and hard to break.

Overall, the snakebot design is much simpler than that of common robots. Thus, snakebots will be much less expensive to build. For example, a robot recently sent to Mars cost over a hundred million dollars, whereas snakebots can cost as little as a few hundred dollars. With their **versatility** and affordability, snakebots seem to be the wave of the future, at least as far as space robots are concerned.

Question 44: What topic does the passage mainly focus on?

- A. The differences between the old robots and the new ones.
- B. The reasons for the appearance of the snakebots.
- C. The composition and abilities of the snakebots.
- D. The physical appearance and problems of the snakebots.

Question 45: According to paragraph 1, the following are disadvantages of the common robots which have been on Mars, EXCEPT _____

- A. uselessness
- B. high manufacturing cost
- C. fragility
- D. difficulty in moving

Question 46: What does the word "they" in the second paragraph refer to?

- A. wheels
- B. regular robots
- C. these things
- D. snakebots

Question 47: According to the passage, which of the following is TRUE about the snakebots?

- A. They can move through myriad difficult terrains.
- B. They are easier to get stuck or fall over than other kinds of robots.
- C. They are unable to work in space like a regular robot.
- D. They are made of over thirty different modules.

Question 48: The author implied in paragraph 4 that a snakebot only completely stops working when _____

- A. the head of the snake has something wrong.
- B. all the modules cannot reconnect with each other.
- C. the whole parts of the snake are broken down.
- D. the energy battery in the snakebot runs out of.

Question 49: The word "separate" in paragraph 4 mostly means _____

- A. join together
- B. divide into many different parts
- C. control others to work in the way you want
- D. have effects on others and the way they develop.

Question 50: The word "versatility" in the last paragraph is closest in meaning to _____

- A. flexibility
- B. rigidity
- C. firmness
- D. ability
