

## Reading

### Sequencing II

Number the stages of a tadpole becoming a frog.

- |       |   |   |
|-------|---|---|
| _____ | The front legs pop out. The lungs are ready to use for breathing. | 1 |
| _____ | The cells in the egg multiply and grow.                           | 2 |
| _____ | The tadpole has become a frog.                                    | 3 |
| _____ | Back legs slowly form.  | 4 |
| _____ | Soon the cells grow into a swimming tadpole.                      | 5 |
| _____ | Front legs develop inside the tadpole.                            | 6 |
| _____ | The tadpole's tail seems to disappear.                            | 7 |
| _____ | A mother frog lays her eggs in water.                             | 8 |
