

Name: _____

Digestive System in Animals

Identify if the animal is **monogastric** or **ruminant**. Write the word.

Buffalo

Zebra

Humans

Identify the name of the organ.

large intestine

stomach

small intestine

Write the name of each process of the digestive system.

elimination

digestion

absorption

The small intestine absorbs the nutrients from the food. From the small intestine, the nutrients go into your blood.

The mouth, the esophagus and the stomach all help our body digest the food we eat.

The large intestine and rectum transform the undigested solids into faeces.

Read the statement and write **true** or **false**.

_____ The function of the digestive system is to break down food and provide nutrients and energy to the body.

Student identifies parts, function, and characteristics of the digestive system.
