ASEXUAL REPRODUCTION IN PLANTS

STOLONS	...are stems that a gardener separatesfrom the parent plant. These stems produce new roots.
TUBERS	...are stems that grow horizontally above the ground. These stems produce roots and a new plat grows.
RHIZOMES	...are horinzontal underground stems. New plants grow from these stems.
CUTTINGS	...grow underground at the bottom of the stem. A new plant grows from each ...
BULBS	...are underground stems. They store many nutrients from the soil.

BULBS **TUBERS** **RHIZOMES** **STOLONS** **CUTTINGS**
