

Read. Write T for *true* and F for *false*. There is one example.

Too much water

Floods can happen when there is too much rain. Rivers and canals become very full. Floods can also happen when there are very big waves in the ocean. When there are floods, the water covers roads and paths. Cars and people can't get out of the area. The water goes into houses, and people have to leave their homes. Sometimes they have to get on the roof of their house to wait for help. The police

and firefighters rescue people with boats and helicopters. Floods can be very dangerous. The water moves fast and it's very strong. Don't play in flood water!

Save water

When there is no water, rivers, and lakes become dry. Plants can't grow and animals can't drink. If there is no food and no water to drink, people die, too. Water is very important. We all need to save water. You can save water at home.

Turn off the faucet when you brush your teeth. Take a shower, not a bath. You can also save water outside the home. Collect rainwater in buckets to water the plants. Don't throw things into rivers or lakes. People and animals need clean water, not dirty water.

1. *Floods can't happen when there is too much rain.* **F**
2. Roads are covered in water when there is a flood.
3. When there's a flood, people have to stay in their homes.
4. Helicopters and boats are useful for rescuing people in floods.
5. When there is no water, rivers, and lakes become wet.
6. You can save water by taking a bath instead of a shower.
7. People and animals can survive with dirty water.
