

UNIT 4: ECOSYSTEM

Write the correct types of ecosystem:

Match the words with the descriptions.

- | | | |
|------------------------|---|--|
| Terrestrial ecosystems | • | • A group of populations that live together in an ecosystem. |
| Aquatic ecosystems | • | • They show the food relationships between living things. |
| Population | • | • Land is the main feature of these ecosystems. |
| Community | • | • Water is the main feature of these ecosystems. |
| Food chains | • | • A group of living things that live in an ecosystem. |

Read the text and find the missing words.

secondary consumers • producers • remains • decomposers • herbivores

Food chains have different links. A food chain usually begins with plants.

Plants make their own food. They are called a) _____.

Primary consumers are b) _____ and they eat producers.

c) _____ are carnivores and omnivores and they eat primary consumers.

Finally, d) _____ are living things like bacteria.

They eat the e) _____ of other living things.
