What's Your Angle?

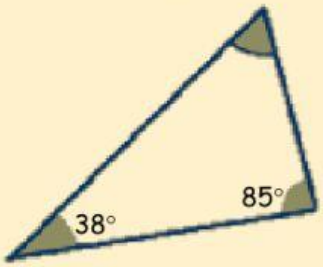

How to find the missing angle.

In a triangle, the three interior (inside) angles always add to 180°:

$A + B + C = 180°$

Example:

Start: $A + B + C = 180°$

Fill in what you know: $38° + 85° + B = 180°$

Rearrange: $B = 180° - 38° - 85°$

$142° - 85°$

$B = 57°$
