1. Match the hazards (A-H) in this warehouse.

a) A man is lifting two boxes at the same time from shelf.
b) A man is pushing the hand truck with the cylinders up a ramp.
c) A worker has overloaded a hand truck with items above handles.
d) There are some large boxes stacked dangerously on the top shelves.
e) There are some gas cylinders on hand truck, not strapped to it.
f) There are some long boxes sticking out from shelves into aisle.
g) A man is standing on bare forks of a fork-lift truck.
h) There are some empty pallets stacked up in the aisle blocking the passage.

2. Match the rules to the hazards in 1.

1) Hand trucks must not be overloaded.
2) Aisles have to be kept free of blockages.
3) Boxes need to be pushed in until they are level with the edge of the shelf.
4) Gas cylinders must always be strapped or chained to hand trucks.
5) The forks of a forklift truck must never be used for carrying people.
6) Larger boxes should not be stacked on higher shelves.
7) Trucks must be pulled, not pushed, up a ramp.

i) Only one item should be removed from a shelf at one time.
