

The Excretory System

KPI- 24.3.6 Summarize the path of urine as it is excreted from the body

- The kidney filters wastes from _____.
 - blood
 - intestine
 - lung
 - skin
- Which organ in the excretory system is a muscle sac that holds the urine?
 - Bladder
 - Kidney
 - Ureter
 - Urethra

3. Match the definition in Column A with the term in Column B

Column A	Column B
1. One of a pair of organs that filters blood	A. Nephron
2. A microscopic filter that removes waste from blood	B. Kidney
3. A harmful substance formed when cells use protein for energy	C. Urea

4. Put the following **three** parts of the urinary system in order as the urine passes through them on its way to the outside of the body.

5. Complete the table below by identifying the part of the urinary system that is responsible for each listed function.

Urethra	/	ureter	/	Kidneys
Function				Part
Urine leaves each kidney through this part				
Urine leaves the body through this part				
Filters the wastes out of the blood
