### Making Paper from Woodchips

Do you have any paper in your bag? It may seem like a 1\_\_\_\_\_ question but do you know how to make paper? What is paper 2\_\_\_\_\_ of? Right. And how about 'wood 3\_\_\_\_\_'? Have you ever heard about it? Well, wood 4\_\_\_\_\_ is a process used to obtain 5\_\_\_\_\_ and paper products from forest trees.

First of all, the tops and 6\_\_\_\_\_ of the trees are cut out and then the logs are 7\_\_\_\_\_ to the mill. At the mill, the 8\_\_\_\_\_ of the logs is removed and the logs are taken to a 9\_\_\_\_\_ which cuts them into small pieces called woodchips. The woodchips are then 10\_\_\_\_\_ to remove dirt and other 11\_\_\_\_\_. Hmm..., at this stage they are either 12\_\_\_\_\_ in this form or changed into the pulp by 13\_\_\_\_\_ and heat. Oh, I almost forgot, the pulp is then 14\_\_\_\_\_ and the water content is removed. Finally, the pulp is rolled out to make paper.

Considering the 15\_\_\_\_\_ of making paper, let's appreciate any paper on our hands. Use it more effectively. Thank you for listening. Bye.
