1. Sunlight strikes with the most vertical angle
   a) at the South Pole
   b) at or near the equator
   c) at the North and South Poles
2. The beam of sunlight always has the same amount of heat energy.
   a) True
   b) False
3. Which beam covers a greater area of Earth?

a) 

b) 

c) 

4. Which angle gives more energy?

   a) 150°
   b) 120°
   c) 90°
5. Areas that are farther north or south of the equator receive:
   a) less heat energy from sunlight than areas that are closer to the equator.
   b) more heat energy from sunlight than areas that are closer to the equator.
