

Resuelve las siguientes potencias de fracciones, según lo visto en clase.

$$\left(\frac{1}{3}\right)^3 = \underline{\hspace{2cm}}$$

$$\left(\frac{1}{3}\right)^4 = \underline{\hspace{2cm}}$$

$$\left(\frac{10}{12}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{2}{3}\right)^5 = \underline{\hspace{2cm}}$$

$$\left(\frac{3}{4}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{3}{12}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{1}{2}\right)^8 = \underline{\hspace{2cm}}$$

$$\left(\frac{2}{4}\right)^3 = \underline{\hspace{2cm}}$$

$$\left(\frac{1}{2}\right)^3 = \underline{\hspace{2cm}}$$

$$\left(\frac{8}{10}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{4}{7}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{3}{8}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{7}{8}\right)^3 = \underline{\hspace{2cm}}$$

$$\left(\frac{2}{6}\right)^2 = \underline{\hspace{2cm}}$$

$$\left(\frac{1}{2}\right)^4 = \underline{\hspace{2cm}}$$
