AT HOME WITH MY COMPUTER

Computers can do various, complicated things, but it wasn't like that when they first appeared on the market. This is my aunt Gloria's story about her family's first computer:

We bought our first computer in the 1990's, when the children were quite young. Home computers were in their infancy too and the model we chose was very simple.

This 'marvel' of modern technology did not come complete - with a monitor and disk drive - but was designed to be used with a TV and a cassette player. In our house this meant sitting on the floor in great discomfort which is the reason why all I remember from those times is an aching back and stiff legs rather than the miracle of the computer. The children, on the other hand, would kneel happily for hours, producing high beeping noises and watching closely at the games on the TV screen.

The programs were mostly in BASIC computer language and to me the 'pictures' on the screen were very basic indeed. Color in those early days was a luxury and the most we could achieve was an exciting range of gray. But when I started to play 'a game' which involved making little colorless blocks move extremely slowly across the screen and build a wall, I began to lose interest.

I wasn't interested in doing my own programming either. In fact, getting the computer to do anything more than write my name on the screen seemed at first to be beyond my skills. The instruction handbook gave directions for more exciting programs, but going through them step by step took time and patience, and I would quickly run out of both.

However, I felt that it was my duty as a parent to explain the instructions to the children so that they could learn more about the computer and new technologies. With this in mind I gathered the family together to study Chapter 1. I wanted to be patient and go over everything as many times as necessary. So I pressed a few keys and carefully explained what I was doing and why. "Yes," said my youngest, who was four at the time, "but if you press this and this and then enter that, it's much quicker and better."

I gave up. While I had been struggling with the first few pages of the instructions handbook, they had covered the first ten chapters simply by experimenting, learning from mistakes and trying out ideas. I felt embarrassed about this lack of knowledge, but didn't want to admit it.

Nowadays I am quite capable of using a personal computer for work, but games are another matter. In this area, my children are still superior. They sometimes ask me to join them for a quick Formula 1 race. While they speed away overtaking everything in sight, I always crash at the first bend. So I generally leave the games to them and I say that I look down on the idea of using computers for fun.

It has taken me a long time and a lot of hard work to become mistress of my own PC and all this hard-won skill should have a serious purpose. However, I must admit that while everybody's out, I keep on trying to kill that particularly nasty-looking alien in a game...
