XII. Read the text about the Amazon forest. Do the tasks that follow.

The Amazon forest covers about five million square kilometres. It is as big as the whole Europe not including Russia. It contains one third of the world's trees. However, the trees are disappearing. If people continue cutting the trees, there will be not many trees left in the future.

Scientists say that there are some changes in the climate because the trees are disappearing. In Peru, there is less snow in the Andes Mountains. In Bolivia, there is very little rain.

If the Amazon forest disappears, there will be less oxygen. We will have breathing problems, the temperature will rise and the ice-caps will melt. As a result, the sea level will rise and seaside cities will be flooded.

A. Decide if the statements are true (T) or false (F). Write T or F.

1. The Amazon forest is bigger than Europe.
2. It has one third of the trees in the world.
3. In Bolivia, there is still much rain.
