FOOD CHAINS

Seaweeds make their own food using .

Seaweed are because they use sunlight to make their own food.

Animals are because they have to eat other living things to get their energy. Energy from food means you can grow and move. Every part of your body needs energy to make it work and grow.

In different environments around the world, different animals eat different things. Some animals eat only plants. Other animals eat animals. Some animals eat .

We show this on a diagram. We call it a .

A food chain shows us how different living things need other living things for food.

The arrows on a food chain show the direction flows.

Food chain energy both producers

sunlight consumers
