

QUIZ THE ECOSYSTEMS

Name _____ Grade: _____

1. Describe with your own words the definition of the ecosystems:

2. Identify the types of the ecosystems:

3. Choose the ecosystem where each animal lives:

4. Choose the characteristics of each ecosystem:

- ecosystems that take place on solid ground and in the air, or in geographical features (mountains, etc.), places where they find everything they need to be born, grow and reproduce.

- we can find both vertebrate animals, such as large mammals, birds or reptiles; as invertebrate animals,

- They have vital functions for the planet, such as helping to regulate the water cycle throughout the planet, forming the environment for a wide variety of species that would otherwise not exist, and they also filter pollution.

- They are one of the richest ecosystems in the world, as they have a great biodiversity.

- Wetlands have a great variety of vegetation, with species that are totally submerged and others with long stems that expose the flowers to the surface of the water. Among these we can mention the Valisnerias, the silver maples or the cypress.
- We can also find animals such as turtles, different

5. Choose the ecosystem according to the image:

Pond

Forest

Mountains

River

Desert

Lake

The sea

Polar

Jungle

River

Ocean
