Question 26. A. shop B. quality C. technology D. number

Question 27. A. what B. that C. whom D. whose

In many ways, the increasingly rapid pace of climate change is a direct result of the human population growth. In the last 100 years, the world population has more than tripled. Obviously, this has meant that the world has needed to produce three times as much food, energy, and other natural resources.

In addition, the average person uses more energy and natural resources than the average person one hundred years ago, meaning that the rates of **consumption** are actually much higher than just the increase in population would imply.

All of these activities: food production, energy usage, and the use of natural resources, contribute to climate change in some way. The greater amounts of oil and other fuels burned to

LIVEWORKSHEETS

create energy release chemicals which add to global warming. In order to produce more food, farmers cut down trees to gain more land for their fields. In addition, we cut down trees to build the houses needed for a larger population. Those trees are an essential part of controlling global warming. In addition to a growing population, the world also has a population that desires a higher standard of living than in the past, and a higher standard of living requires the use of even more natural resources. For example, China is the world's most populous nation, with 1.3 billion people. Currently, the standard of living for most of those people is far below that of people in first world nations. If every Chinese person attains a first world lifestyle, the amount of energy and natural resources needed in the world will double, even if the standard of living in every other nation on Earth remains the same as it is today.

Question 28. *How many times has world population increased in the last 100 years?*

A. very little B. twice C. five times D. three times

Question 29. *The word "**consumption**" in the passage is closest in meaning to _____.*

A. development B. usage C. population D. increase

Question 30. *According to the passage, how does food production contribute to global warming?*

A. Food production requires that the forests be cut down to make room for farmland.

B. Food production uses many chemicals which harm to global warming.

C. Producing more food leads to growth in the world population.

D. Food production decreases the ability of the air to release heat.

Question 31. *According to the passage, why does the standard of living affect global warming?*

A. Higher standards of living are better for the environment.

B. First world nations create less population than developing nations.

C. The use of natural resources is directly related to the standard of living.

D. High standards of living lead to increases in world population.

Question26. A. ask B. teach C. learn D. request

In the United States and its territories alone, there are more than 40 national parks, varying considerably in landscape and mood. Each park was chosen for its unique features, representative of a particular region of the country. Everglades National Park, for example, at the southern tip of Florida. is a huge subtropical swamp, which provides refuge for such unusual reptiles as the alligator and for thousands of varieties of birds. including the graceful pink flamingo. In sharp contrast to the Everglades are the arid, dusty parks of the West. Mesa Verde National Park in Colorado. for example, preserves the ruins of an Indian civilization which 'flourished in the twelfth and thirteenth centuries. Today, tourists can wander through the awesome cliff dwellings that the Indians carved out of the steep rock.
