

ACTIVITY 2:

Advances in Space Exploration:

Landing on an Asteroid:

In 2018, a space probe landed on an asteroid.

The space probe collected information from this asteroid.

Asteroids can be rich in rare minerals.

We use these rare minerals in industry and technology.

1. In 2018, a landed on an asteroid.

- A. space telescope
- B. space shuttle
- C. space probe
- D. space rocket

2. can be rich in rare minerals.

- A. space stations
- B. stars
- C. asteroids
- D. telescopes

3. Rare minerals are used in industry and technology.

- A. False
- B. Never
- C. True
- D. All of the above
