TEXT 1

Read this text carefully and choose the best option for every question.

THE ARCTIC REGION

The Arctic region is a big area around the North Pole. It is opposite the Antarctic region around the South Pole. The Arctic region includes the very cold waters of the Arctic Ocean. Parts of Canada, Greenland, Alaska, Siberia and other Nordic territories are in the Arctic. Many parts of the region are covered with ice and snow.

The Arctic region is very big, but only about four million people live there.

People who live in the Arctic region have adapted their lives to the cold climate there. But today, many people, for example the Inuit of North America, do not live in igloos any more. They live in modern houses with electricity.

Arctic people use the natural resources they have to eat, to make clothes, to decorate their houses, etc. Seals, whales, polar bears, reindeer and salmon are very important for the Arctic people.

There are other natural resources in the Arctic region, for example oil, gas and minerals. People from other parts of the world want those resources. Will they destroy the beautiful Arctic region?

1. The Arctic region is...

- | | |
|--------------------|--------------------------|
| a. a mountain | ☐ |
| b. a big ocean | ☐ |
| c. a big area | ☐ |
| d. a small country | ☐ |

TEXT 2

Read this text carefully and choose the best option for every question.

ABOUT PAPER

Paper is very important in our lives. We use paper to write, print, decorate, make books, make money and many other things.

Paper is very old. Chinese people made paper 2000 years ago.

Basically, paper comes from trees. We can make different types of paper depending on the characteristics of the trees: tree species, climate and geographic location.

Trees living in cold climates are very strong because they grow very slowly. We can use these types of trees to make newspapers - the pine tree is a good example of a strong tree.

Other tree species are not very strong, for example, eucalyptus, and we cannot use them in many industrial applications.

Paper can be recycled many times depending on the type of paper. But when paper is contaminated with chemicals, it is more difficult to recycle.

Today on our planet, 30 per cent of paper fibres come from recycled paper and cardboard.

1. How old is paper?

- a. It is 2000 years old ☐
- b. It is 1000 years old ☐
- c. It is 30 years old ☐
- d. This information is not in the text ☐

2. Basically, paper comes from...

- a. plastic ☐
- b. oil ☐
- c. trees ☐
- d. minerals ☐

3. Cold climates produce...

- a. strong trees ☐
- b. pine trees and eucalyptus ☐
- c. trees that are not very strong ☐
- d. trees that grow quickly ☐

4. Contaminated paper is...

- a. easy to recycle ☐
- b. difficult to recycle ☐
- c. impossible to recycle ☐
- d. very strong ☐
