| 22 | move  | show   | open  |
| 23 | fish  | live   | eat   |
| 24 | place | group  | water |

### HUMPBACK WHALE

Humpback whales are one of the largest species of whales.

They **19.** \_\_\_\_\_ up to 16 metres long and weigh up to 30 tonnes. These whales are **20.** \_\_\_\_\_ as baleen whales because they have baleen instead of teeth. Baleen is made of a **21.** \_\_\_\_\_ but bendable material called keratin. To eat, they **22.** \_\_\_\_\_ their mouths while swimming to take in a large amount of water and fish. Then, they close their mouth and push all the water out through the baleen, keeping only the fish to eat. Humpback whales **23.** \_\_\_\_\_ in both cold and warm water and are found in most oceans worldwide. Usually, they eat in places with
