By simplifying and reducing administration and handling (14)

_____, logistics companies help customers save time, energy and (15) _____. Modern companies focus on their customers' needs and continually provide creative new (16) _____ to add flexibility, reliability and efficiency to their businesses.

Part III: (1 pts)

Question 17-20: Read the passage and decide whether the statements below are true (T) or false (F).

It should be noted that global supply chain management involves a company's worldwide interests and suppliers rather than simply a local or national orientation. Thus, it comes with a number of new issues. For example, companies have to consider the overall costs. Although local labour costs may be significantly lower, companies must also focus on the costs of space, tariffs, and other expenses that are related to doing business overseas. Additionally, companies need to consider the exchange rates.

Time is another big issue that should be addressed when dealing with global supply chain management. The productivity of the overseas employees and the extended shipping times can either positively or negatively affect business. Besides, the weather conditions vary greatly in different parts of the globe; they can impact production and shipping too. Customs clearance time and other governmental red tape can add further delays that need to be planned. Another issue that must be integrated into a global supply chain management strategy is supplier selection.

STATEMENTS

- 17. Because global supply chain management usually involves many countries, it comes with a number of new issues.
- 18. Time is another big issue that should be addressed when dealing with global supply chain management.
- 19. The productivity of the overseas employees usually does not affect business.
- 20. Supplier selection is not important for global supply chain management.

PART IV (1.5 pts)
