Name _____

FOOD CHAINS AND FOOD WEBS
FOOD CHAIN
The starting point is the sun.
PRODUCERS
Use energy from the sun to make their own food.
Plants and algae are examples of producers.
CONSUMERS
Get energy when they feed on other living organisms.
Primary
They eat producers. Herbivores and omnivores.
Secondary
They eat primary consumers. Carnivores and omnivores.
Predators
Are the animals which attack and eat other animals.
DECOMPOSERS
Feed on the remains of living things.
FOOD WEB
The food webs are interconnected.
Predators can compete for the same prey.
Plants can compete for sunlight
Cooperation is when organisms of the same species work together
Ants and bees
