a. university b. government
5. The word 'exhibitions' means
a. shows b. stars.

B- Read the following text then do the tasks below:

According to the World Health Organization, air pollution causes the greatest environmental threat to our health. Innovators began to think of new technological innovations which could help in protecting the environment by reducing air pollution. One of these innovators is the Dutch innovator Daan Roosegaarde, who has developed large towers that remove air pollution emitted into the air.

The tower is a seven-meter high structure that removes bacteria from dust particles in the air. Air from the area surrounding the tower is drawn into the structure. All airborne particles receive an electric charge. The charged particles are caught on large collector plates that have an opposite electric charge. The clean air is then blown from the tower back into the environment.

-Decide if the following sentences are True (T) or False (F). (10M)

6. Air pollution doesn't cause any threat to the environment.
7. Roosegaarde's tower removes bacteria from dust particles in the air.
8. Reducing air pollution could help protecting the environment.
9. The charged particles are stored in small rooms.
10. The tower is made to clean the surrounding open-air.

C. Choose the correct answer (a or b). (40M)
