

DIVCIPARA SKAITĻA DALĪŠANA AR VIENCIPARA SKAITLI.

Paraugs:

$$\begin{array}{|c|c|c|c|c|c|} \hline 5 & 2 & : & 4 & = & (4 \ 0 + 1 \ 2) : 4 = 4 \ 0 : 4 + 1 \ 2 : 4 = \\ \hline \swarrow & \searrow & & & & \\ \hline 40 & 12 & & = & 1 \ 0 + 3 & = 1 \ 3 \\ \hline \end{array}$$

Dalot galvā, skaitli jāsadala divos saskaitāmos.

Sadalīt ieteicams tā, ka viens dalāmais dod pilnus desmitus! Tas nozīmē, ka dalītājs ir jāpareizina ar 10, 20, 30 vai citu pilnu desmitu.

RĒĶINI PĒC PARAUGA!

$$\begin{array}{|c|c|c|c|c|c|} \hline 6 & 5 & : & 5 & = & (5 \ 0 + 1 \ 5) : 5 = \quad : \quad + \quad : \quad = \\ \hline \swarrow & \searrow & & & & \\ \hline \boxed{} & \boxed{} & & = & \boxed{} + \boxed{} & = \boxed{} \\ \hline \end{array}$$

$$\begin{array}{|c|c|c|c|c|c|} \hline 9 & 6 & : & 6 & = & \quad + \quad : \quad = \quad : \quad + \quad : \quad = \\ \hline \swarrow & \searrow & & & & \\ \hline \boxed{} & \boxed{} & & = & \boxed{} + \boxed{} & = \boxed{} \\ \hline \end{array}$$
