

**I. FILL IN THE BLANKS:**

1. Angles can be measured using a \_\_\_\_\_.
2. A right angle measure \_\_\_\_\_ degrees.
3. The common end point where two rays meet is called an \_\_\_\_\_.
4.  The hexagon has \_\_\_\_\_ sides.
5.  $160^\circ$  is \_\_\_\_\_ than a right angle.

**II. CHOOSE THE CORRECT ANSWER:**

1. Which one of the following is an open shape?

- a) Right angle b) angle more than a right angle c) angle less than a right angle
3. Which one of the following measure is a right angle?  
a)  $90^\circ$  b)  $45^\circ$  c)  $60^\circ$
  4. How many angles are there in a letter "H"?  
a) 6 b) 4 c) 3

- The hands in the clock shows \_\_\_\_\_
- a) right angle b) angle less than a right angle c) angle more than a right angle
