

1. Do you always say what you mean and mean what you say? Probably nobody does so all. In any case, Professor Albert Mehrabian's 7-38-55 rule might just (1) your mind. In his research, he measured how much meaning is communicated via verbal and nonverbal communication. The results (2) that only 7% of meaning is communicated through speech, 38% is conveyed through tone of voice, and 55% is shown through body language.

People should learn to (3) this rule in all forms of negotiation. It can help them gain the (4) hand. Since so much meaning is communicated through body language, being able to read body language is (5) for anyone who would like to improve his or her negotiation skills. Besides listening to other people's words, you should look for cues from nonverbal (6). When you are familiar with speech patterns, you can easily (7) a lie by noticing inconsistencies between spoken language and body language. Furthermore, you should slow down the (8) of negotiations if body language signals that tension is building up. Better yet, you will know when your counterpart's (9) is down. With this rule in mind, you can also monitor your own (10) and control your body language. Then others will not easily know what you are thinking.

4. Who is liked more, a male or female leader? Most of you would probably say both, but the Howard / Heidi case study says (1). This study was conducted at Columbia Business School. There, the students were presented with a successful case study of a Silicon Valley entrepreneur, Heidi Roizen. Half of the students were told that the (2) was a person named Heidi, while the other half was told it was Howard. Simply put, the only apparent difference was the subject's (3). (4) being the same person, the assessment were different. The students made (5) comments about Heidi and Howard. (6), they thought both of them were equally competent, but they liked Howard more than Heidi. Some even thought Heidi was selfish and did not want to work with her. Why are successful men more well-liked while successful women are considered arrogant and bossy? (7) with the results of the case study, women tend to want to be liked, which can hinder them when it comes to achieving success. As Sheryl Sandberg (8) it, "We need change. Everyone needs to get more (9) with female leaders, including female leaders themselves." Women have to (10) the fear of being liked or not in order to become successful. In the end, we all need to become comfortable with ourselves if we really want to be happy with our successes.

5. Interested in watching a horror movie over the weekend? Scientists have long been interested in the fact that many people enjoy watching horror films, especially in October, (1) many people have believed that ghosts and spirits rule. Why are they willing to spend good money on something so frightening? One obvious reason is that watching these movies can (2) a real fight-or-flight response, (3) the body with adrenaline, endorphins, and other chemicals, which usually pump us up to take on challenges. Also, after watching a scary movie, people often have a satisfying sense of accomplishment, in spite of the (4) of real danger. The audience may feel (5), as if they had conquered evil alongside the protagonist in the movie. Interestingly, scientists also found in their research that horror movie fans have somehow been more (6) than those who aren't horror fans during the COVID-19 pandemic. Watching horror movies can help you learn to deal with uncertainty and anxiety, because of what you need to do during a horror movie: (7) your own emotions. Moreover, horror movies allow audiences to (8) their dark side. Sometimes, you might identify with the murderer, instead of the victim, in a movie, especially when he or she has been driven to a break down. If presented with the same (9), you might consider making the same desperate decisions, (10) you would otherwise never do in real life. So, are you still interested in watching a horror movie this weekend?

7. In some parts of the world, low-income families cannot afford to buy a water heater. In winter, they have to (1) down trees for firewood to heat their water. The (2) of wood produces carbon dioxide, which in turn affects global warming. On the other hand, many people have to heat their water this way and so, deforestation is (3) as a result. Many adults must have wished that a water heater with eco-friendly functions and customer-friendly prices could (4) out for the sakes of both poor people and the Earth.

It was not until 2018 that such a water heater was invented, called Warm Bath. The (5) of this solar-powered water heater was an eight-year-old girl from southern Mexico, Xóchitl Guadalupe Cruz López. The water heater was made (6) from discarded objects, including hoses, glass panels from a former construction site and logs. After the (7) of the Warm Bath on the roof of her house with her father's help, Xóchitl hoped to build a bigger water heater. Young as she was, she (8) kept her community in mind, as she once noted that, with her water heater, the poor people of her community would not have to cut down trees to heat their water.

At the age of four, Xóchitl first demonstrated her interest in the field of science. She has taken part in science fairs (9). Because of her solar-powered water heater, she became the first child to win a (10) science prize from the National Autonomous University in Mexico (UNAM), a prize usually awarded to adults.
