

Application WS_G8_Classification and Angle Sum Property for Polygon

1. Is it possible to construct a polygon, the sum of whose interior angles is 20 right angles? If yes, find the number of sides of the polygon.

2. The angle of a hexagon are in the ratio $1 : 2 : 3 : 4 : 6 : 8$. Find the measure of the smallest and the biggest angles.

3. One of the angle of a polygon is 100° and each of the other angles is 110° . Find the number of sides in the polygon.

4. The ratio of number two sides of two regular polygons is $3 : 4$ and the ratio of the sum of their interior angles is $1 : 2$. Find the number of sides of each polygon.

5. The four angle of a hexagon are 60° , 90° , 150° and 180° and the other two angles are equal. Find the measure of these equal angles.
6. The measure of four angles of a heptagon is equal and the measure of the other three angles is 120° each. Find the measure of unknown angles.
7. The four angle of a pentagon are equal and the fifth angle measure 140° . Find the measure of four equal angles.
8. The seven angle of an octagon are 132° each. Find the measure of the eighth angle.
9. The angles of a pentagon are x° , $(x - 5)^\circ$, $(x + 15)^\circ$, $(3x - 44)^\circ$ and $(x - 70)^\circ$. Find x .

- 10.** The angles of a pentagon are $(x - 1)^\circ$, $(x - 2)^\circ$, $(x - 3)^\circ$, $(x - 4)^\circ$ and $(x - 5)^\circ$. Find the value of x and the measure of all angles.
- 11.** Four of the angles of a pentagon are equal. The fifth angle is 40° . Find the angles.
- 12.** Each interior angle of a polygon is 150° . Find the sum of interior angles of a polygon which has half the number of sides of the given polygon.
