

STRUGGLES WHILE PROGRAMMING

Yesterday; while I was programming, I had some struggles.

First: I was struggling with coding, so I checked a tutorial.

I was concentrating on it when the electricity went out.

I was waiting until the power be back,

while new ideas were emerging for my program.

Second: I was writing my logarithms in my notebook,

but I really needed the computer to introduce and compile my code.

And, suddenly, the electricity came back!

Third: I powered my laptop and started to write my code.

The code was being compiled when I blocked myself.

I was living a nightmare; I tried to relax and continue.

Fourth: I restarted my work and;

while I was fixing or trying to fix my code,

I noticed that I was staring at the monitor all day.

I felt tired, although blue light glasses were being worn by me.

Finally, I decided to debug my code.

I was searching that one line that was returning an error,

when I realized that I had to rewrite the code from scratch.

This is a day in the life of a programmer!

ANSWER THE FOLLOWING QUESTIONS

1. Yesterday, what happened to you?

2. Were you struggling with coding?

3. What happened while you were watching the tutorial?

4. Were you writing your algorithms on the computer?

5. What happened while you were compiling your code?

6. Were you staring at the monitor for a long time?

7. Were you wearing blue light glasses?

8. What happened while you were debugging your code?

VOCABULARY

Repeat the following words

Although	Nightmare
Blue Light Glasses	Noticed
Came Back	Powered
Compile	Realized
Debug	Restarted
Electricity	Staring
Emerging	Started
Error	Struggles
Finally	Struggling
First	Suddenly
Fixing	Third
Fourth	Tried
Introduce	Trying
Logarithms	Tutorial
Myself	Until
Returning	Waiting
Scratch	Went Out
Second	While
Some	Worn
