

NoMo ... what?

Wednesday, July 28

We are living in a new age (0) *B of* connectivity.

However, being able to contact people all the

(1) can be both a good and a bad thing!

On the one hand it's good to be (2) to talk to

anyone at any time, wherever we are. The downside is that

some of us have become too dependent (3)

our phones and computers. Psychologists have identified

a condition (4) as 'NoMoPhobia', which

is a real fear of being without your mobile phone! This

sometimes happens when people who use their phones a

lot are (5) from them for a certain period.

It seems that this loss can (6) in panic

attacks and even hallucinations. Some young people who

(7) part in an experiment said that they kept

imagining that their phones were ringing during the night!

Would you be able to live (8) your phone or

computer for a week? It's an interesting question, isn't it?
