A century of change
Since (0) <u>the</u> beginning of the last century there have been enormous changes in the way (1) people live. (2) world has become a much smaller place and (3) life is much faster.
In (4) first half of the twentieth century, (5) horse was gradually replaced by (6) motor car as (7) most popular form of transport. (8) hundred years ago, (9) air travel was in its infancy; now there are over 90 000 commercial flights (10) day worldwide. In the 1940s, (11) steam trains were still a common sight on the world's railways. They have now all but disappeared from mainline routes and in several countries electric-powered high-speed trains can be seen racing across (12) countryside at around 300 kilometres (13) hour.
And (14) information travels faster, too, thanks to developments in information technology, telecommunications and mass media. Having your own computer at (15) home was almost unheard of in 1970, but just 40 years later in 2010 there were well over (16) billion personal computers in use worldwide. Invented in 1876, (17) telephone was already fairly widely in use by 1910, with some seven million installed in (18) United States alone. But who could have predicted that a century later an estimated 70 per cent of the world's population would own (19) mobile phone? Commercial television did not really take off until just after (20) Second World War and we all know how successful that phenomenon has been!
Another area where enormous changes have taken place is
