1. Label the different parts of the female reproductive system. Write all the names <u>using small letters</u>.

2. Here you have the functions of the different parts. Write the names in the correct part. <u>Use small letters</u>.

- Their role is *producing the female sex hormones* that control reproduction and *the female eggs* (called ova) for possible fertilization.
- They serve as pathways for the ova (egg cells) to travel from the ovaries to the uterus. Fertilization of an egg by a sperm normally occurs in this part.
- Also commonly known as the '*womb*', is responsible for the development of the embryo and fetus during pregnancy.
- In childbirth it expands to provide a channel for delivery of a newborn from the uterus.
