Today we are going to learn English vocabulary about your project: Minerals! Specifically, we are going to learn about Rocks and their most important characteristics. First, watch the video below (you can look for *Types Of Rocks The Dr. Binocs Show* in Youtube in case you can't see it here):

Now that you have watched the video, answer the questions (you can rewatch the video again, of course):

1. What kind of music does the presenter like: pop / hip hop / rock music.
2. There are (3) types of rocks:

rocks,  rocks and  rocks.

3. The name Igneous rocks comes from the latin word Ignis, which means rock / fire / hot rock.

They are formed when the  comes out of a  .

and later cools down and solidifies. There are 2 types of igneous rocks:

and  igneous rocks.

Examples of Igneous rocks:

4. Sedimentary rocks are comprised of sediments. They could be made of

and other organic matter that have been

compressed and deposited over a long time. They can be found on

or  beds.

5. Metamorphic rocks come from igneous or sedimentary rocks. When they are exposed

to high temperatures and pressures for a very long time, they change. This change is

called

.

Examples of metamorphic rocks:

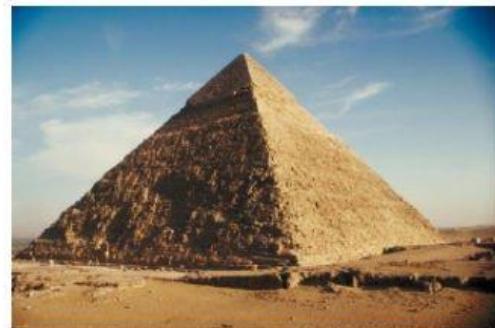

We can find examples of all these rocks around us. Here you have 3 very important buildings

made of different materials:

Marble (Taj Mahal, in India)

Limestone (The pyramids of Giza)

Sandstone (Ankor Wat in Thailand)

Finally, click on the link and watch and enjoy the short video called "Lava" from Disney, that explains the story of two volcanoes (if it doesn't work you can look for Disney Music – Lava):
