Parts of a Plant (Recap)

Name the parts of the plant using its function.

1. Makes food for the plant-
2. Anchors the plant-
3. Carry water from roots to other parts-
4. Makes fruits and seeds-

List the two types of roots.

- a) \_\_\_\_\_ (has one main root)
- b) \_\_\_\_\_ (has many roots)

Answer the true or false questions using a T or an F.

1. The stem keeps the plant upright. \_\_\_
2. The leaves hold melanin. \_\_\_
3. The roots create new seeds. \_\_\_
4. The flower of a plant is vibrant and colourful. \_\_\_

Fill in the blanks.

Jamie loves plants. One day, her mother asked her if she knew the parts of her favourite plant, a sunflower. Jamie was so confused, she did not realise plants had parts. The next day when she went to school, she asked her teacher about the features of a plant. This is what he said;

1. The \_\_\_\_\_ is the vibrant part of the plant that creates seeds to make more plants.
2. The \_\_\_\_\_ holds the plant upright and transports nutrients to the other parts.
3. The \_\_\_\_\_ anchors the plant to the ground and absorbs nutrients from the soil.
4. The \_\_\_\_\_ creates food for the plant and absorbs carbon dioxide.

Great Job! Now write a paragraph on your on talking about the parts of a plant.
