

Listening Practice

1. Fill the gaps

We've been discussing the factors the architect has to consider when designing domestic buildings. I'm going to move on now to consider the design of public buildings, and I'll (1) _____ this by referring to the new Taylor Concert Hall that's recently been completed here in the city.

So, as with a domestic building, when designing a public building, an architect needs to consider the function of the building – for example, is it to be used primarily for entertainment, or for education, or for (2) _____? The second thing the architect needs to think about is the context of the building, this includes its physical location obviously, but it also includes the (3) _____ of the building how it relates to the people it's built for. And finally, for important public buildings, the architect may also be looking for a central (4) _____ on which to base the design, a sort of (5) _____ for the building and the way in which it is used.

Let's look at the new Taylor Concert Hall in relation to these ideas. The location chosen was a site in a (6) _____ district that has been ignored in previous redevelopment plans. It was occupied by a factory that had been empty for some years. The whole area was some distance from the (7) high-rise _____ of the central business district and shopping centre, but it was only one kilometre from the (8) _____. The side itself was bordered to the north by a canal which had once been used by boats bringing in raw materials when the area was used for manufacturing.

The architect chosen for the project was Tom Harrison. He found the main design challenge was the location of the site in an area that had no neighbouring buildings of any importance. To (9) _____ the fact that the significance of the building in this quite run-down location was as yet unknown, he decided to create a building centred around the idea of a (10) _____ – something whose meaning still has to be discovered.

So how was this reflected in the design of the building? Well, Harrison decided to create (11) _____ access to the building and to make use of the presence of (12) _____ on the site. As people approach the entrance, they therefore have to cross over a (13) _____. He wanted to give people a feeling of suspense as they see the building first from a distance, and then close-up, and the (14) _____ he wanted to create from the shape of the building as a whole was that of a box. The first side that people see, the southern wall, is just a high, flat wall uninterrupted by any windows. This might sound off-putting, but it supports Harrison's (15) _____ of the building – that the person approaching is intrigued and wonders what will be inside. And this flat wall also has another (16) _____. At night-time, projectors are switched on and it (17) _____ as a huge screen, onto which images are projected.

The (18) _____ itself seats 1500 people. The floor's supported by ten massive pads. These are constructed from (19) _____, and so are able to (20)

_____ any vibrations from outside and prevent them from affecting the auditorium. The walls are made of several layers of honey-coloured wood, all sourced from local beech trees. In order to improve the acoustic properties of the auditorium and to (21) _____ the sound, they are not straight, they are curved. The acoustics are also adjustable according to the size of (22) _____ and the type of music being played. In order to achieve this, there are nine movable panels in the (23) _____ above the orchestra which are all individually motorized, and the walls also have curtains which can be opened or closed to change the acoustics.

The reaction of the public to the new building has generally been (24) _____. However, the (25) _____ of some critics has been less enthusiastic. In spite of Harrison's efforts to use local materials, they criticise the style of the design as being international rather than local, and say it doesn't reflect features of the landscape or society for which it is built.

2. Write the meaning of the words

1.	architect		
2.	design		
3.	location		
4.	redevelopment		
5.	materials		
6.	manufacturing		
7.	significance		
8.	unknown		
9.	approach		
10.	vibrations		
11.	acoustics		
12.	international		
13.	features		
14.	society		
15.	adjustable		

Make at least 5 sentences with the words above
