

Public Health Research

Based on our previous discussion of what public health research is, you will match the information in column A to that in column B:

Column A		Column B	
1	Sex education programs		Prevent disease and improve people's lives
2	Determine demographic factors associated with vehicular accidents		Generation of new knowledge to reduce health gaps
3	Reduce community risks in environmental health due to floods		Research-derived materials that transform problems into solutions
4	Social knowledge management		Social justice is necessary
5	The public health purpose		Experimental research in laboratories with vaccines
6	The health and disease conditions of the communities		Community-based research/action for the care of riverbanks
7	New rotavirus appears in the world		It is the responsibility of the whole society
8	People's health		Protection factors for safe sexuality
9	For public health		Reduce death by traffic accidents
10	Public health research		It depends not only on biological but also on social determinants
