Human Impact: Vehicles and the Environment

Think about your everyday lives. How often is it impacted by a vehicle. It can be getting in to the family car, going on vacation on a plane, fire fighters in their truck or food delivered to grocery stores.

But, as useful as vehicles are, they also have a huge negative impact on the environment. They create water and air pollution. The roads they travel on destroy natural habitats.

You have been hired as a consultant by the city to bring attention to how vehicles impact the environment. You need to:

1) How do vehicles help us in our daily lives?

2) What are the impacts of building, using and disposing of vehicles? (be specific, not just "pollution")

3) What are natural resources used by vehicles?

4) What are some ways people can reduce the impact of vehicles?
