# STUDENT WORKSHEET

**Analytical Exposition**

By Ryan Juniar Alyasa, S.Pd..

## KD DAN INDIKATOR

### **KD:**

**3.4 Membedakan fungsi sosial, struktur teks, dan unsur kebahasaan beberapa teks eksposisi analitis lisan dan tulis dengan memberi dan meminta informasi terkait isu aktual, sesuai dengan konteks penggunaannya.**

### **INDIKATOR (Pertemuan 2):**

**3.4.5 Membedakan Fungsi Sosial, Struktur Teks dan Unsur kebahasaan dari teks Analytical Exposition bertema Environmental Issue berdasarkan pertanyaan yang tersedia (C4/ Kognitif Kunci)**

**3.4.6 Memvalidasi Fungsi Sosial, Struktur Teks dan Unsur Kebahasaan dari beberapa teks Analytical Exposition bertema Environmental Issue (C5/ Kognitif Pengaya)**

**LINK LKPD INTERAKTIF:**

## INSTRUCTION

In the **Section 2**, you have 2 Analytical Exposition texts and you will try to:

1. Analyze the both texts
2. Find the differences between them

Try to discuss them with your group

**Note:**

You can also listen the texts by clicking them

## TEXT 1

### The Harmful Effects of Littering

We produce a lot of waste every day. Indeed, this cannot be avoided but finding a good way to overcome it is a must. Because, the habit of littering can affect the environment to be very terrible. Here I will state some reasons why littering can give us some very harmful effects to our life.

Firstly, if your environment does not smell nice, there may be some organic waste scattered about. The organic waste can rot and will pollute the air with an unpleasant odor. Rotten garbage is also a place for harmful germs. These harmful germs can be spread through the air or with the help of flies. That means, when you let the organic waste scatter around, you also have to be prepared to get sick.

Second, Non-organic waste or what is called non-biodegradable waste, for example, styrofoam and plastics, can also have a negative impact on the environment. In fact, this type of garbage causes flooding in urban areas. Plastic and styrofoam that are dumped carelessly will be carried by rainwater to the drain. Then it piles up in the gutter and clogs the drains. When this situation has occurred, then flooding can no longer be avoided.

Furthermore, this type of waste is also often carried out to sea. So that it can pollute water and endanger marine life. The dangers are very real. In fact, hundreds of marine animals such as fish, turtles, whales, and seals have died because they accidentally ate plastic or cigarette butts. This number will continue to grow if we don't start changing our habit of littering. If the disaster above is not enough to arouse your heart, do you want to eat fish with garbage in its stomach? If not, change bad habits.

So in conclusion, I would like to state that littering can affects our environment in a very harmful way. It will pollute our air with a very bad odor. Then, it can also cause flood in our area. And the last, it will also pollute our sea.

## TEXT 2

### The Importance of Recycling Waste

Recycling is a process where waste reproduced into new products. A product which has served its purpose will be discarded, and recycling is an effort to extend its usage life. This process has a lot of benefits to humanity and earth. Here I explain the importance of recycling for humanity and earth.

First, recycling a material can help preserve the environment. For example, recycling paper can result in paper production without additional trees falling. According to Dr. Bennet (2019), by recycling more paper and selling it to the consumer, more paper can be used without further damaging the forest.

Second, recycling a material takes less energy than producing an item from raw materials. For example, an aluminum product uses both aluminum and a huge amount of energy to produce it from raw ore. Based on the research by PLN (2020), by recycling an item made of aluminum, we can reuse the metal again and also save huge energy during the production process.

So finally, recycling becomes increasingly important in a world where the population is booming. More and more waste is being produced every single day. If these products are not recycled at the end of the product life, they will take generations to break down or decompose.

## Validity Check!

No	Question	Validity Check	
		True	False
1	Does the both Text have the same Social Function?	😊❤️	😭
2	Do the both Texts have Thesis Paragraph?	😊❤️	😭
3	Does the Text 1 have 3 Argument Paragraphs?	😊❤️	😭
4	Does the Text 2 have 3 Argument Paragraphs?	😊❤️	😭
5	Does the Text 1 have Reiteration Paragraph?	😊❤️	😭
6	Does the Text 2 have Reiteration Paragraph?	😊❤️	😭
7	Do the both Texts use Simple Present Tense in them?	😊❤️	😭
9	Do the both Text use the same Chronological Connection?	😊❤️	😭
10	Are there any Causal Conjunctions in the both Texts?	😊❤️	😭

## Finding Differences

1. Did you find any differences about the Social Function of Text 1 and Text 2?

---

---

2. Did you find any differences about the Structure of Text 1 and Text 2?

---

---

3. Did you find any differences about the Language Features of Text 1 and Text 2?

a. Chronological Connection:

---

---

b. Mental Verb:

---

---

c. Quote Sentence:

---

---
