# Wild Animals

1

My favorite wild animal is the giraffe because it is beautiful and tall. Did you know the giraffe is a mammal? All animals that can produce milk and have warm blood are mammals, like humans! Also, giraffes are herbivores because they only eat herbs, tree leaves and flowers, they don't eat meat like lions.

2

My favorite wild animal is the frog, there are many types of frogs and in different colors. Frogs are amphibians, so they need water or a humid place to live. The frog is a carnivores animal because it eats insects, worms and snails. Ugh!

3

My favorite wild animal is the parrot, I wish I could have one! A parrot is a bird, its body is full of feathers of different colors and they can fly. Did you know that parrots can eat meat and vegetation? That's why they are omnivores, they eat flowers, insects, seeds and much more.

4

My favorite wild animal is the crocodile, it is so scary. The crocodile is a reptile, it can't breathe underwater. Crocodiles are carnivores, they only eat meat! So, be careful!
