THE WORLD'S GREATEST INVENTIONS

Read the following pragraph and answer the questions

Braille

Braille is a special system of writing and reading for blind people. Braille letters are made up of dots, or bumps. Blind people read these dots by running their fingertips across them to recognize the pattern of the dots. Braille uses a special code of sixty-three characters. Each character has one to six dots. These dots are arranged in a six-position pattern. For example, in the pattern for the letter C, the top two dots are raised, but the lower four are not. Braille gets its name from the inventor of this writing system. Louis Braille, a blind science and music teacher, invented this special alphabet in France in the 1800s. Today millions of blind people all over the world are able to read and write because of this simple yet effective communication system.

1.In your own words, what is Braille? Begin your sentence like this: "Braille is..."

2. Are Braille letters similar in shape to normal letter? If not, Which is the difference?

3. How are the dots arranged?

4.Who was Braille system invented by?

5. Use the dictionary and find the words that match the meanings

are made up of	a dot
small point	useful, producing a good effect
a bump	a small raised area
effective	consist of
