

## UNIT 1.- THE LANDSCAPES OF SPAIN

### 1.- Complete:

The Earthcrust is...

- a) The \_\_\_\_\_ and \_\_\_\_\_.
- b) Made up of \_\_\_\_\_.
- c) Forms \_\_\_\_\_ and the \_\_\_\_\_.

OUTERMOST

SEABED

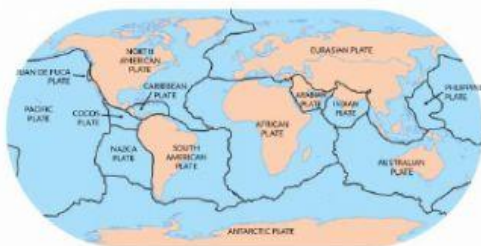

ROCKS

CONTINENTS

THINNEST

### 2.- Complete:

The Theory of the Tectonic Plates

More than 4 billions years ago there was only \_\_\_\_ continente which name was \_\_\_\_\_.

Movement of \_\_\_\_\_ caused the formation of the existing continents.

Causes:

- The force of \_\_\_\_\_.
- The Earth's \_\_\_\_\_.

### 3.- Match:

Plates that MOVE APART

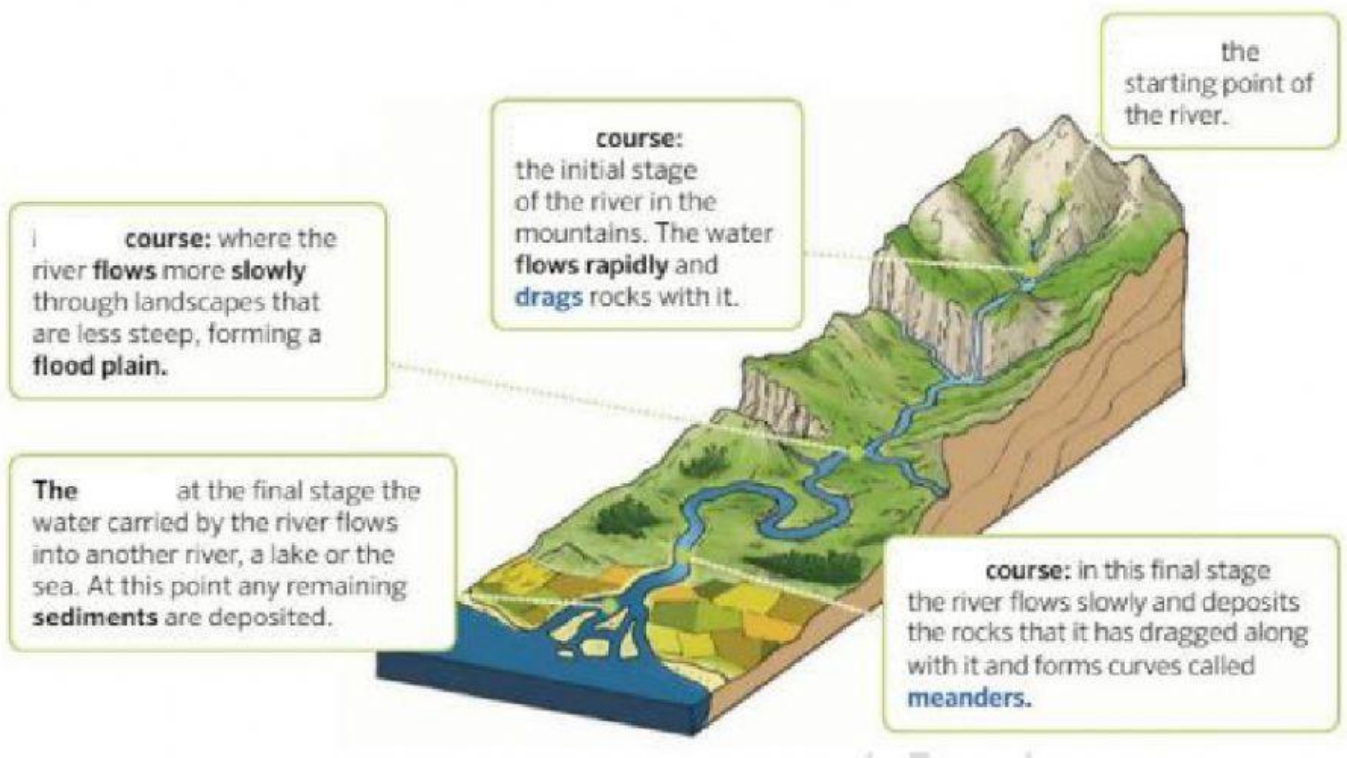

form EARTHQUAKES

Plates that SLIP UNDER

form VOLCANOES

4.- Complete the river stages:

5.- Match:

Length

Quantity of water the river flows

Water Flow

Distance between the source and mouth

Flow Régimen

Changes in the water flow along the year

6.- What is the watershed? Write Cantabrian, Atlantic or Mediterranean

|                                                                                                                           |                                                                                                                                                                                              |                                                                                                                                                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                           |                                                                                                                                                                                              |                                                                                                                                                                                                                                  |
| <p>The rivers are short, the water Flow is abundant, the and the flow regimen is regular.</p> <p>Eo, Navia, Narcea...</p> | <p>The Ebro is the longest river in Spain and one of the most abundant water Flow.</p> <p>The rest are short, flooding in autumn with an irregular regimen.</p> <p>Júcar, Segura, Ter...</p> | <p>Galician rivers are short with an abundant water flow. The regimen is regular. Tambre, Ulla...</p> <p>Others are long and the water flow is different in summer and Winter.</p> <p>Tajo, Guadiana.</p> <p>Guadalquivir...</p> |

7.- Write T (True) or F (False):

The cantabrian coast has a rocky coast with many cliffs. \_\_\_\_\_

The Atlantic coast is made up of Galician, Andalsian and Islas Canarias Coast.

\_\_\_\_\_

The mediterranean coast goes from Tarifa to Cabo de Gata. \_\_\_\_\_

8. Write the climate factors that affect to climate in Spain:

L \_\_\_\_\_

D \_\_\_\_\_

A \_\_\_\_\_

R \_\_\_\_\_
