

Classwork-L63-64

Q.1 Multiply :

A multiplication problem is shown with a grid for the answer. The multiplicand is 1.75 and the multiplier is 2.4. The decimal point in 1.75 is indicated to be 2 decimal places from the right, and the decimal point in 2.4 is indicated to be 1 decimal place from the right. The grid has three columns for the multiplicand and four rows for the multiplier. The first row of the grid is empty. The second row has a plus sign to its left. The third row has a plus sign to its left. The fourth row has a plus sign to its left. The decimal point in the answer is placed in the first column from the right, and a bracket indicates that the decimal point is 2 places from the right.

Decimal will be placed after places from the right

Q.2 Multiply :

A multiplication problem is shown with a grid for the answer. The multiplicand is 1.36 and the multiplier is 0.15. The decimal point in 1.36 is indicated to be 2 places from the right, and the decimal point in 0.15 is indicated to be 2 places from the right. The grid has three columns for the multiplicand and four rows for the multiplier. The first row of the grid is empty. The second row has a plus sign to its left. The third row has a plus sign to its left. The fourth row has a plus sign to its left. The decimal point in the answer is placed in the first column from the right, and a bracket indicates that the decimal point is 2 places from the right.

Decimal will be placed after places from the right
