

TOEFL EXERCISE 8: Study each of the passages and choose the best answers to the questions that follow.

PASSAGE ONE (Questions 1–4)

The teddy bear is a child's toy, a nice soft stuffed animal suitable for cuddling. It is, however, a toy with an interesting history behind it.

Line Theodore Roosevelt, or Teddy as he was commonly called, was president of the United
(5) States from 1901 to 1909. He was an unusually active man with varied pastimes, one of which was hunting. One day the president was invited to take part in a bear hunt; and inasmuch as Teddy was president, his hosts wanted to ensure that he caught a bear. A bear was captured, clanked over the head to knock it out, and tied to a tree; however, Teddy, who really wanted to hunt a bear, refused to shoot the bear and, in fact, demanded that the bear be extricated from the ropes; that is, he demanded that the bear be set free.

(10) The incident attracted a lot of attention among journalists. First a cartoon—drawn by Clifford K. Berryman to make fun of this situation—appeared in the *Washington Post*, and the cartoon was widely distributed and reprinted throughout the country. Then toy manufacturers began producing a toy bear which they called a “teddy bear.” The teddy bear became the most widely recognized symbol of Roosevelt's presidency.

1. According to line 1 of the passage, what is a “teddy bear”?
 - (A) A ferocious animal
 - (B) The president of the United States
 - (C) A famous hunter
 - (D) A plaything
2. Look at the word pastimes in paragraph 2. This word could best be replaced by
☐ past occurrences
☐ previous jobs
☐ hunting trips
☐ leisure activities
3. Look at the word extricated in paragraph 2. Click on another word or phrase in paragraph 2 that is close in meaning to extricated.
4. In line 10, a “cartoon” could best be described as
 - (A) a newspaper
 - (B) a type of teddy bear
 - (C) a drawing with a message
 - (D) a newspaper article

PASSAGE TWO (Questions 5–8)

Line A supernova occurs when all of the hydrogen in the core of a huge star is transformed to
(5) iron and explodes. All stars die after their nuclear fuel has been exhausted. Stars with little mass die gradually, but those with relatively large mass die in a sudden explosion, a supernova. The sudden flash of light can then be followed by several weeks of extremely bright light, perhaps as much light as twenty million stars.

Supernovae are not very common; they occur about once every hundred years in any galaxy, and in 1987 a supernova that could be seen by the naked eye occurred in the Magellan Cloud, a galaxy close to the Milky Way. Scientists periodically detect supernovae in other galaxies; however, no supernovae have occurred in the Milky Way (the galaxy that includes Earth) since 1604. One
(10) very impressive supernova occurred in the Milky Way on July 4, 1054. There was a great explosion followed by three months of lighted skies, and historical chronicles of the time were full of accounts and unusual explanations for the misunderstood phenomenon—many people believed that it meant that the world was coming to an end.

5. A “supernova” in line 1 is which of the following?
 - (A) The iron component of a star
 - (B) The core of a star
 - (C) The hydrogen in a star
 - (D) The explosion of a star
6. According to the passage, which of the following best describes the “Magellan Cloud” in line 7?
 - (A) A galaxy inside the Milky Way
 - (B) A cloud composed of hydrogen
 - (C) A galaxy near Earth's galaxy
 - (D) A cloud in the sky above the Earth

7. Look at the expression Milky Way in paragraph 2. The Milky Way is

- ☐ part of Earth
- ☐ a galaxy close to Earth
- ☐ the galaxy that is home to Earth
- ☐ a creamy-colored cloud in the sky

8. Click on the word in paragraph 2 that is closest in meaning to “unusual occurrence.”
