Future

How do you imagine the world in three decades?

Listen to the conversation between the host and three young people and fill in the text with the missing words :

warn / theory / afraid / progress / danger/ pessimist / world / identify / camera / liberty / threats / surveillance / ourselves / robots / predictable / change / relying / microchip / anymore / fear

(HOST): So, how do you people imagine the world in 3 decades, hey?

#1: I mean, I'm a bit of a …………………………myself, so I'll admit that my view of the …………………..in 3 decades isn't fantastic. I don't think that we'll have made much …………………..in equal rights, in …………………….and I think that people will be more and more afraid of ………………………..and………………………. That actually our liberties will be reduced because people will be so……………………….., they'll want security and ………………………….and I think we won't be able to do anything that won't be looked at by a ………………….or observed through the Internet.

(HOST): But technology will, will be in leaps and bounds, I mean, …………………….will be doing so many things, so in ……………………………….they should be doing things better, shouldn't they?

#2: That is what I was thinking. I was thinking technology is the main ……………….that is going to happen, in… between now and then. In what direction? It is ……………………….that obviously it's going to take over more and more aspects of our daily life… for better or for worse but I… I, I just imagine the world as a very computery place. I don't know if I can say that word, but…

(HOST): Computerized

#2: Computerized

(HOST): place

 #2: Computerized place indeed, I …………………….that we're not… we're going to…. lose independence and we won't be relying upon ………………………anymore or we are going to be …………………………..upon our phones and…

(HOST): You won't have phones, you won't have phones, you'll have a …………………………..implanted in your body and everything will be done like that and it will monitor your body and so you won't have …………………………diseases or illnesses because it will be able to …………………….you earlier on, that you have a problem.

 #2: Exactly.

#3: That sounds good but then they'll also know everywhere you go because the chip will, you know, the chip will …………………..you wherever you are.
