

The Human Body

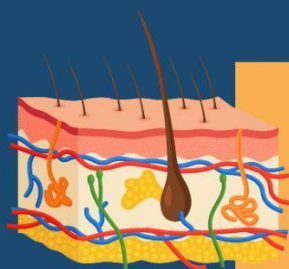

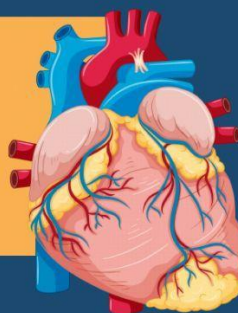

The human body is a complex machine made up of many different parts.

Muscles are an important part of the body because they allow us to move and lift things.

Our brains are also important because they help us think and control our actions.

The heart is a vital organ that pumps blood throughout the body.

The skin is the largest organ in the body and it helps to protect us from the outside world.

The skeleton is made up of bones and cartilage, which provide support and protection for the body's organs and tissues.
