1. Watch and pay attention to the following material video.

2. Multiple Choices Question.

Jennifer Lopes is the successful female artist

Jennifer Lopes (J.Lo) is a highly successful actress, singer, and dancer. Her new? LMS and new albums usually go straight to the top.

What's a typical working day for her? Making a ? lm is hard work. She usually gets up at half past five in the morning and she's always on the? lm set at half past six. She never drinks coffee and she always has a light lunch of just green salad. She doesn't like working up late at night. She is usually in bed at half past ten. If she stays out late, she will be too tired the next morning.

Adam Shankman, a director of one of her? LMS, says "J.Lo is actually a quiet person. She doesn't like going out all the time. She often stays at home on Saturday nights and watches the video.

If J.Lo isn't working on a ? lm or making a record, her lifestyle is very different. When she has got time off, she's quite happy to go out. She loves New York restaurants. She loves dancing. She sometimes dances until three o'clock in the morning!

J. Lo's family lives in New York. They were a very close family. She sees her parents every weekend and she always phones them if she has a problem. She's got two older sisters and they get on very well together. They are not just her sisters; they are her best friends.

1. What is the text about?

A. A successful actress

B. Jennifer Lopez

C. Jennifer Lopez's sisters

LIVEWORKSHEETS

D. Jennifer Lopez's sisters

2. What does J.Lo do when she has a problem?

A. Sees her parents every weekend

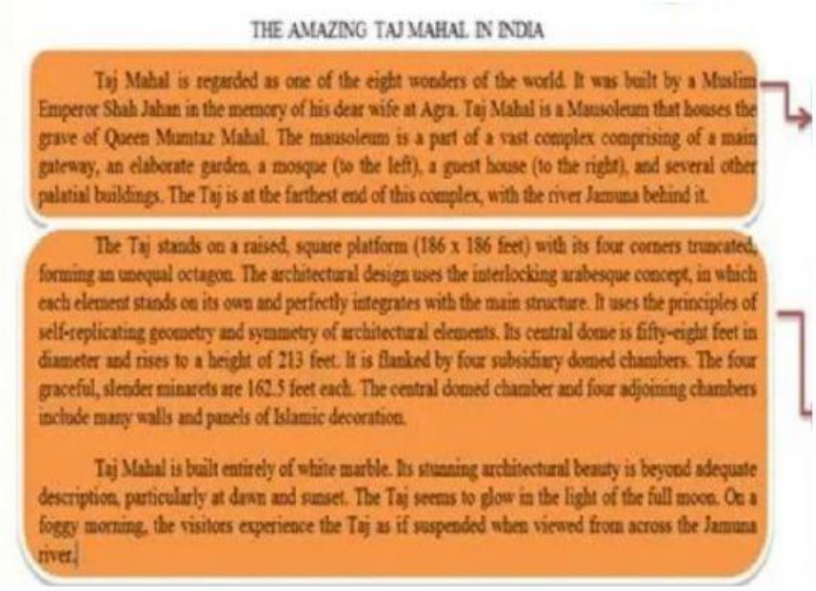
Choose of the name of following sectiom correctly.

Part 1.



THE AMAZING TAJ MAHAL IN INDIA

Taj Mahal is regarded as one of the eight wonders of the world. It was built by a Muslim Emperor Shah Jahan in the memory of his dear wife at Agra. Taj Mahal is a Mausoleum that houses the grave of Queen Mumtaz Mahal. The mausoleum is a part of a vast complex comprising of a main gateway, an elaborate garden, a mosque (to the left), a guest house (to the right), and several other palatial buildings. The Taj is at the farthest end of this complex, with the river Jamuna behind it.

The Taj stands on a raised, square platform (186 x 186 feet) with its four corners truncated, forming an unequal octagon. The architectural design uses the interlocking arabesque concept, in which each element stands on its own and perfectly integrates with the main structure. It uses the principles of self-replicating geometry and symmetry of architectural elements. Its central dome is fifty-eight feet in diameter and rises to a height of 213 feet. It is flanked by four subsidiary domed chambers. The four graceful, slender minarets are 162.5 feet each. The central domed chamber and four adjoining chambers include many walls and panels of Islamic decoration.

Taj Mahal is built entirely of white marble. Its stunning architectural beauty is beyond adequate description, particularly at dawn and sunset. The Taj seems to glow in the light of the full moon. On a foggy morning, the visitors experience the Taj as if suspended when viewed from across the Jamuna river.

Part 2.

Earthquake

Earthquake occurs in places where earth movements take place. An earthquake is a sudden movement or tremor of the earth.

Earthquake can be destructive. Cities and millions of lives can be destroyed. To rebuild the destroyed city, huge sum of money is needed, not to mention the time taken to rebuild it.

Earthquakes are caused by powerful forces at work inside the earth. These forces cause underground pressure and movement. Movement and pressure build up tension and trap energy in the rock strata inside the earth. When the pressure becomes too great, the rock will snap, creating a fault. At the same time, the stored-up tension and energy are released. An earthquake therefore occurs.

A severe earthquake is estimated to be as powerful as one hundred atomic bombs, shooting out energy in waves, most of which is driven underground, thus lessening the effect.

Fire sparked off by an earthquake can be a great danger to the cities. Waves running along the surface of the ground not only destroy buildings, but can also damage waterpipes and start fires simultaneously. Firemen will be helpless against the fire if there is no water. For this reason, many cities "prone" to earthquake store water in special places so that there will be water even if under-ground waterpipes are broken.
