

## Lesson 4

### Topic "How to build a startup?"

We start learning key vocabulary about Startup Culture

# READING

## EXERCISE 1A

Read the first three paragraphs of the text and find the words that mean:

- a) Able to be seen through clearly
- b) Adjusting
- c) Start developing something successfully
- d) Desire to take active part in something
- e) With an optimal balance of value to price
- f) Giving good results
- g) Business founder

Did you ever dream of building your own startup? Even if you didn't, startup mentality and startup culture are very popular topics in the tech world. Steve Jobs even once said that Apple is the biggest startup on the planet. Today we'll talk about why startup culture is so influential and what it takes to build your own successful startup.

Many startups have values that even big businesses are trying to adopt such as:

- Quickly adapting to change
- Demanding high levels of involvement and engagement from all co-workers

- Having open, honest and transparent relationships between teams and management
- Thinking outside the box and finding innovative, cost-effective solutions to customers' problems.

Even if you're not planning on creating your own business, thinking like an entrepreneur can be very beneficial for your personal development and career growth. So what qualities do you need to have to get your business off the ground?

## EXERCISE 1B

Complete the text below with the right headline for each paragraph.

*Can you think of any other steps that you'll have to plan when building a startup (in addition to these 4)?*

- Prepare you pitch
- Develop a vision for your product

- Put together a great team
- Think about the logistics

1. \_\_\_\_\_

It all starts with a good idea. Ask yourself: What customer **pain point** can I solve? Which gaps in the market can our business fill? Is our solution elegant and **scalable**? Can we **pivot** if we have to?

such as access to low-cost equipment, mentorship, help with marketing, PR and **pitching**, living accommodation, networking opportunities and **helping** the startup find **prospective** investors.

2. \_\_\_\_\_

As a **leader**, you need to be in charge of people to **hire**. Very often new **businesses** are formed by a couple of friends who have known each other for years and share the same mindset. However, as your company grows you will have to **bring** new people **on board**. It is important that your new employees are the right **match** for the company. That means they not only have the right skill set for the job but also share the same motivation and passion for your common vision and goals.

4. \_\_\_\_\_

If you ever **come across** someone important (say, a potential mentor or shareholder) you want to be able to deliver a **concise informative** speech about yourself / your product or your company. That's what **pitching** is all about. By getting your idea out there to people who can fund you and **mentor** you in the future can be scary because there's a lot **at stake**. However, it is important to pitch as many **people** as possible. Even if you don't get a partnership or a contract, every pitch can be a source of **valuable** learning for the future and the people you give it to may even suggest useful tips or make you see things from a different perspective.

3. \_\_\_\_\_

Where will you be located as a **business**? What **expenses** will you have to **take into account**? What annual budget will you need? A CEO is a bit of a **jack-of-all-trades** at least during the early stages of the startup. What can help you **though** is an incubator. Incubators are **non-profit** organizations or individuals which provide new **businesses** with a range of possibilities

In short, having an entrepreneurial spirit is **beneficial** for everyone and the 4 tips we've just discussed can be applied in other areas such as your job or personal life. In future segments, we will focus more on how to create and deliver your own **pitch**.

 Listen to the audio recording (track 2.1.) of the text and check your pronunciation.
