

TEST: ENERGY (II)

2- Complete the chart with the missing words. Then drag and drop the pictures.

SOURCES OF ENERGY

_____ SOURCES
They are replenished naturally.
They are infinite and sustainable.

_____ SOURCES
They are finite and non-sustainable.

_____ It uses panels to convert sunlight energy into electricity.

_____ It is a liquid fossil fuel. It is refined from crude oil.

_____ It uses wind turbines to convert kinetic energy into _____

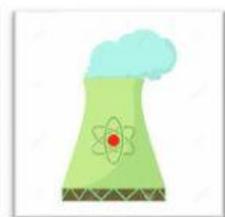

_____ It is a solid fossil fuel. It is burned in power stations.

_____ It transforms the kinetic energy of a flow of water _____

_____ It is a mixture of gases. It is used for heating, cooking or burned in power stations for electricity.

_____ It transforms the thermal energy in aquifers below the surface of the Earth into electricity

_____ ENERGY
It breaks atoms of uranium to release energy. It doesn't produce air pollution, but it produces dangerous radioactive waste.

_____ Such as ethanol or pellets. They are made of organic waste. They are more sustainable than fossil fuels, but release CO2.
