

The cell Cycle/Teacher Noor Alborno

A cell cycle is **a series of events that takes place in a cell as it grows and divides.**

-A cell spends most of its time in what is called

-during interphase the cell

-The cell then leaves
undergoes and completes its division in a
stag called.

What happens is the cell cycle step by step?

- 1- G1, stage, the cell
- 2- S, stage, the cell
- 3- (gap 2, or G2, stage), the cell
- 4- (mitosis, or M, stage)
- 5- the interphase stage is the longest, it includes
stages

The cell spends most of its time in

.
