

## Exam Practice Unit 3

### Lesson 1: Fossils

1) Which is not a fossil?

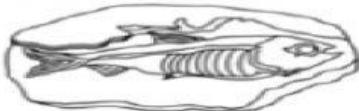

- 
- 
- 
- 

2) A ----- is a model that is created when an imprint of a fossil is filled with a new material.

cast

mold

3) A fossil is what is left of a living thing from the \_\_\_\_.

future

present

past

4) Fossils that are buried close to the surface are ----- than fossils buried deep in the ground.

younger

older

5) The remains of organisms from the past are called -----.

Fossils

Stones

6) Fossils can tell us how the Earth's----- has changed over time.

weather

environment

## Exam Practice Unit 3

7) What type of animal does the fossil in the picture look like?

Three line drawings of prehistoric animals. The top drawing shows a horse-like creature with a long neck and a long tail. The middle drawing shows a lizard-like creature with a long tail and a patterned body. The bottom drawing shows a dog-like creature with a long tail and a patterned body.

8) A fossil with fins shows that the animal most likely could \_\_\_\_\_.

walk

fly

move through water

9) The dodo bird became ----- because it was hunted by humans and some animals.

extinct

famous

10) Fish fossils that are found on land most likely mean .

**fish used to live on land**

### land used to be covered with water

11) All endangered organisms will become extinct.

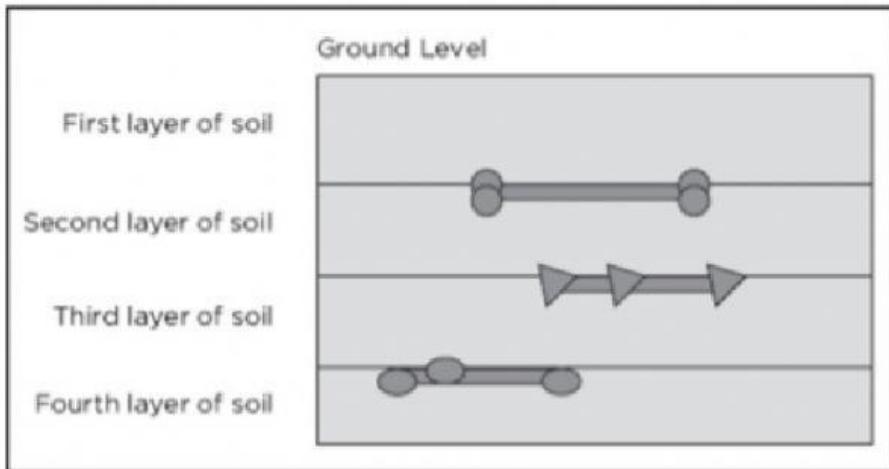

True

False

12) Which animal is extinct?

## Exam Practice Unit 3

13) The fossils of a dinosaur were found in the third layer of soil. What do we know about the fossils of a second dinosaur found in the fourth layer of soil?

- a) Fossils in the third layer is younger than fourth layer
- b) Fossils in the third layer is older than fourth layer

14) In which category is the saber-toothed cat found?

### endangered

extinct

15) Today, all that is left of dinosaurs are their -----.

## Fossils

## Hair

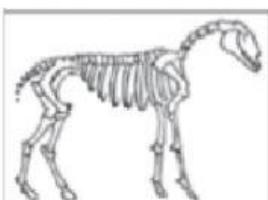

16) How deep a fossil is buried gives scientists clues about its .

age

size

## population

17) What can you tell about the animal in the picture?

**It flew from tree to tree.**

**b) It could walk and run.**

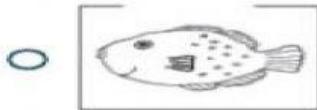

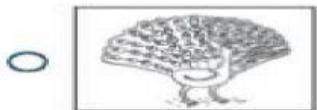

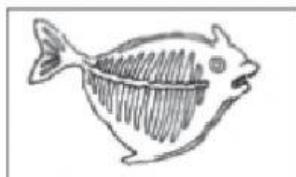

## Exam Practice Unit 3

18) Scientists find clues to Earth's past through fossils.

True

False

19) It looks most like which animal that lives today?

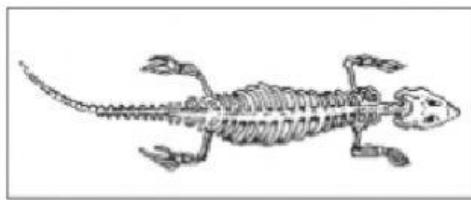

20) Some dinosaur fossils have structures that look like wings. This could mean  
\_\_\_\_\_.

they lived in water

they could fly

they were large

21) What part of this skeleton fossil suggests this animal lived on land?

The feet showed it moved by walking.

The tail showed it moved by walking.

The head showed it moved by walking.

## Exam Practice Unit 3

22) Only a few organisms become extinct each year.

**True**      **False**

23) When there are not many of one kind of animal left, the animal is considered \_\_\_\_\_.

24) If not enough is done for a species that is endangered, then it may become extinct

**True**      **False**

25) Which are reasons that an animal may become extinct? Select all that apply.

**loss of habitat**      **pollution**      **extra food supply**      **hunting**

26) An animal is endangered when \_\_\_\_\_.

b) it can protect its young from harm

c) it can no longer find food or live in its environment

## Exam Practice Unit 3

### Lesson 2: Changes Affect Organisms

1) An environment can be changed by \_\_\_\_\_, which washes away soil and plants.

a flood

a drought

a tornado

a wildfire

2) How could a wildfire affect the environment of a deer or mouse?

No food and shelter

it does not affect them at all.

3) A farmer accidentally planted seeds of an invasive species in his field.

How is the plant harmful to the environment?

a) It will not harm the environment.

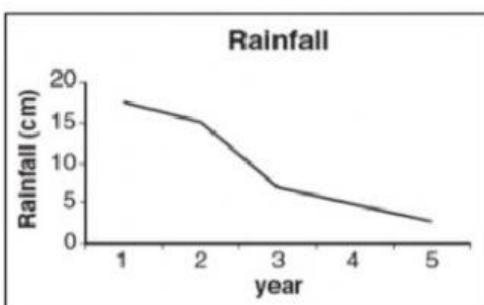

b) It blocks sunlight and takes nutrients that native plants need.

4) When plants and animals cannot adapt to their environment, their population \_\_\_\_\_.

dies off

survives

5) The graph below shows changes in rainfall in an area over five years.

To continue living in this environment, an animal would need to be able to store water for a long time and to adapt to new ways to find water

True

False

## Exam Practice Unit 3

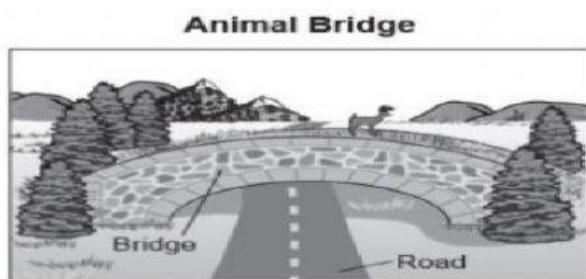

6) Which could happen if people introduced a new animal into an environment?

- a) The environment will not be affected.
- b) All plants and animal can no longer live
- c) The animal uses up resources.

7) Which is one way humans endanger animals?

- a) Cleaning environments where animals live.
- b) Clearing rain forests.

8) A road was built through a forest. Large animals that lived in the forest, such as deer and bears, could not safely cross the road. Fast-moving cars and trucks often hit animals that were crossing the road. So, a group of people built a bridge over the road. Scientists observed a deer walking over the bridge instead of crossing the road, as shown.

Make a claim about the effect that the bridge has on the animals in the forest, based on the given information.

Circle the cross or tick if you agree or disagree

- a) Animals can cross safely
- b) Scientists observed a deer walking over the bridge instead of crossing the road.

Changes affect organisms
