- Venus
- Mars
- Saturn

An ordinal number is a number that denotes the position or rank of something in a set, such as 1st, 2nd, 3rd, 4th, etc.

1st (first)

2nd (second)

3rd (third)

4th (fourth)

5th (fifth)

6th (sixth)

7th (seventh)

8th (eighth)

☆ fifth ☆ first ☆ second ☆ third ☆ sixth ☆ seventh ☆ eighth ☆ fourth

1st: "_____ among the planets in our solar system is Mercury."

2nd: "Venus takes the title of _____ planet in our solar system."

3rd: "Earth, the _____ planet, is known for its abundant life."

4th: "Mars, the _____ planet, has been a subject of intense study for its potential for life."

5th: "Jupiter, the _____ planet, is a gas giant and the largest planet in our solar system."

6th: "Saturn, the _____ planet, is best known for its stunning ring system."

7th: "Uranus, the _____ planet, is a gas giant and famous for its tilted axis."

8th: "Neptune, the _____ planet, is the farthest planet from the sun in our solar system."

Adjectives add more detail to a sentence and help make the description of a noun more vivid and interesting.

**"happy," "red," "quick,"
"large" and "tall"**

"The **tall tree swayed in the wind."**

Final - Beautiful - Unusual - Largest - Red
